

S2 lab prep

- 1.) $P(s) = -(g/l)/(s^2 - (g/l)) = -49.05/(s^2 - 49.05)$
- 2.) This is the matlab code used to generate the unit response.

```
s = tf('s');  
pendulum = -(9.81/0.2)/(s^2 - (9.81/0.2));  
step(pendulum)
```

- 3.) This is the graph generated by the step response

- 4.) This plant is not stable it goes from an exceedingly large number to negative without resting. This can also be shown via a root locus plot.
